Spotting the Special Opportunities

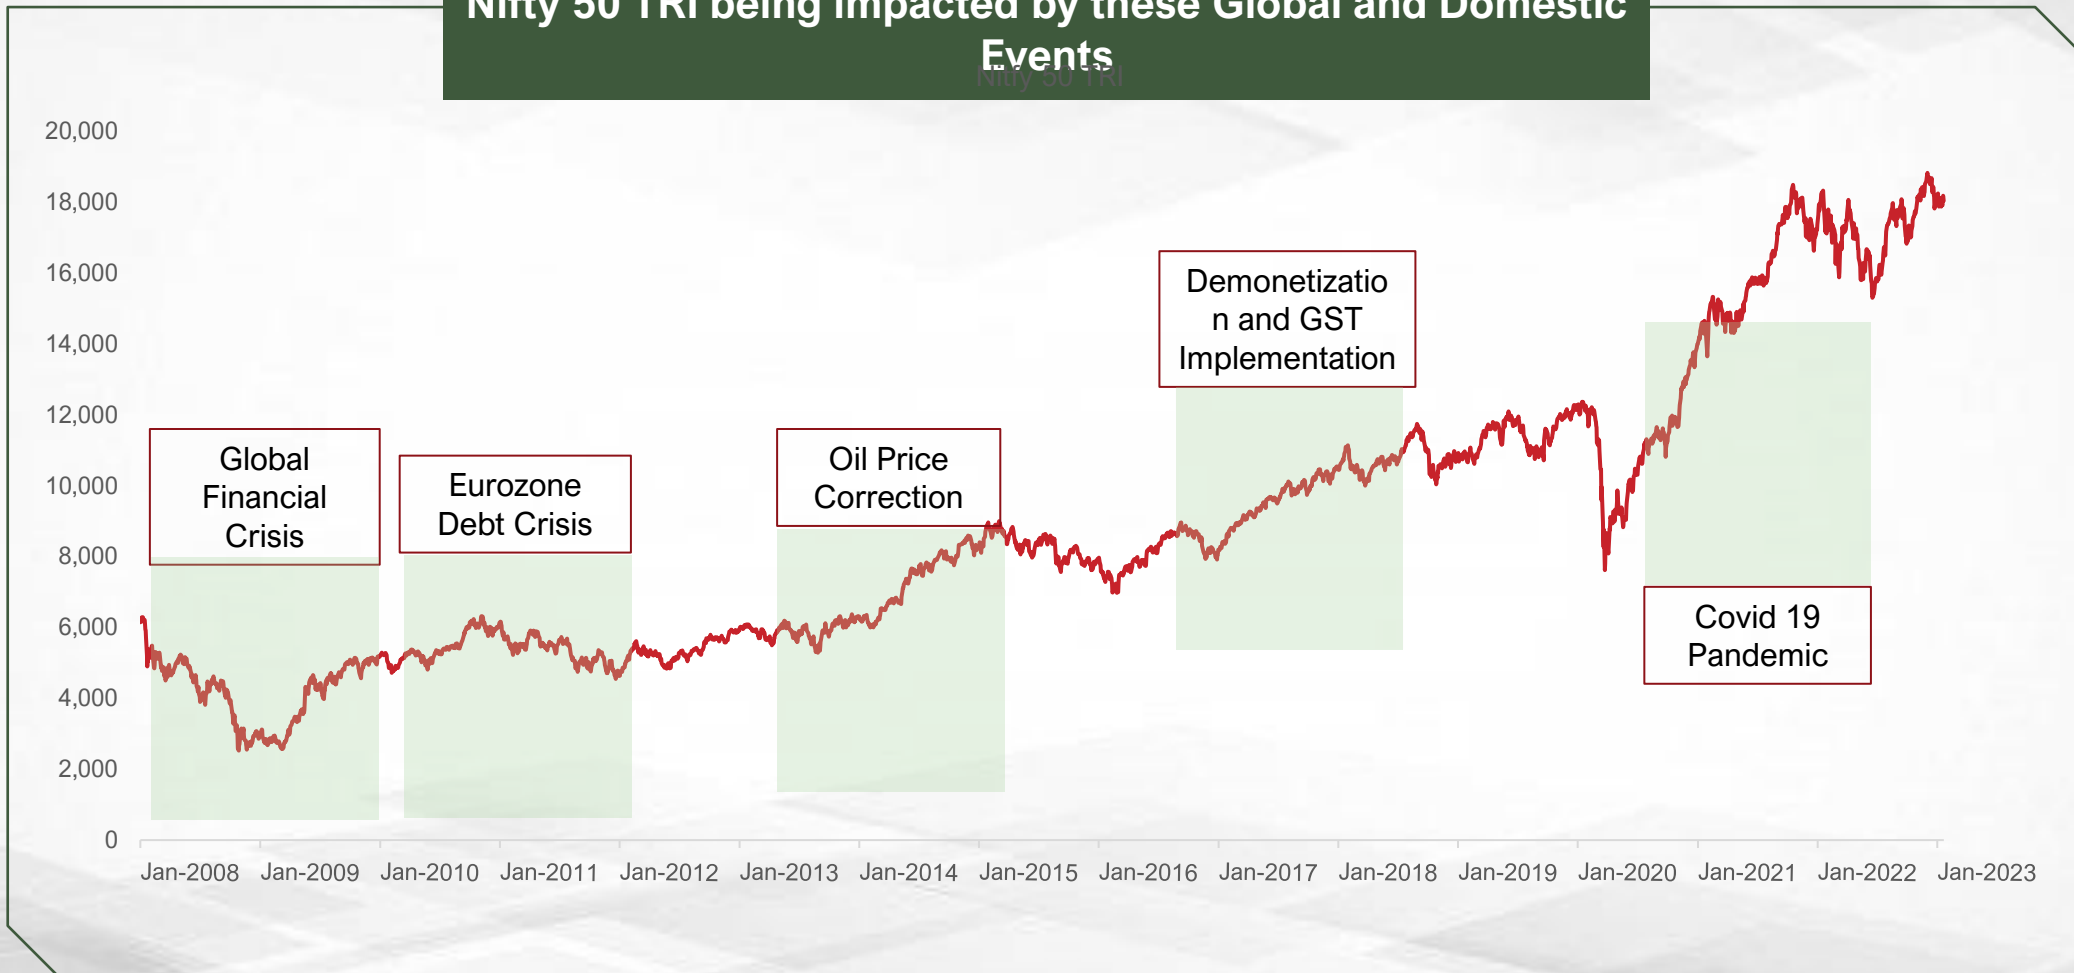

Special Opportunities refers to unique challenges that a business, sector or an economy may face.

Special Opportunities leads to temporary dislocation in price, creating wonderful investing opportunity.

A single glance at the Nifty 50 index over the past 15 years

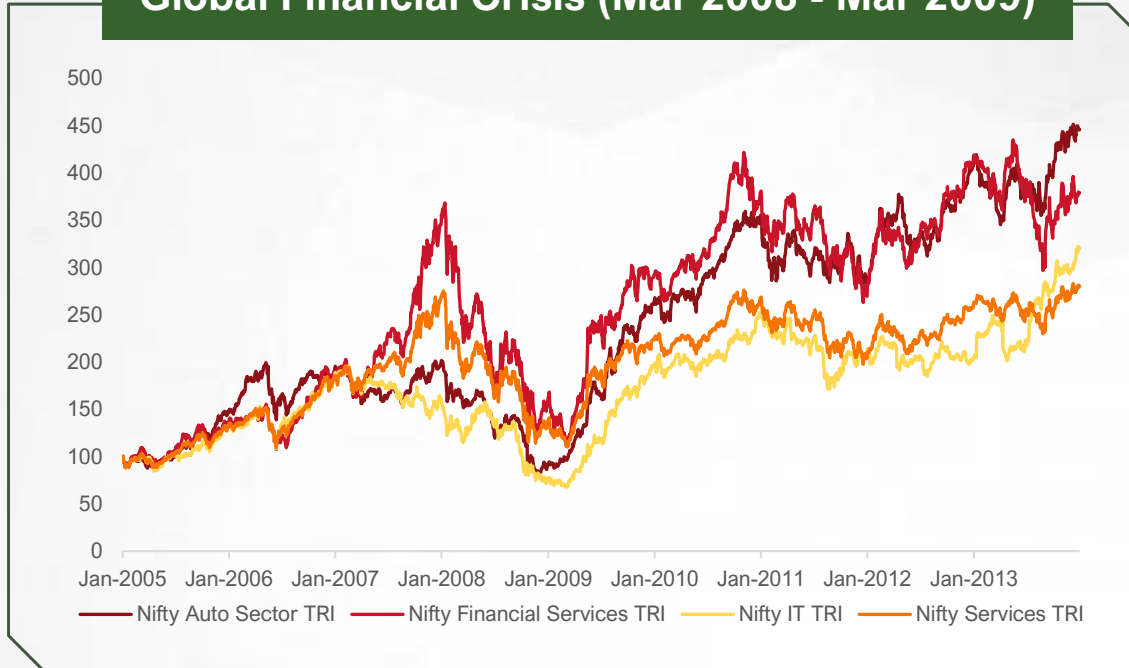

Nifty 50 TRI being impacted by these Global and Domestic Events

Data Source for all the graphs – Bloomberg

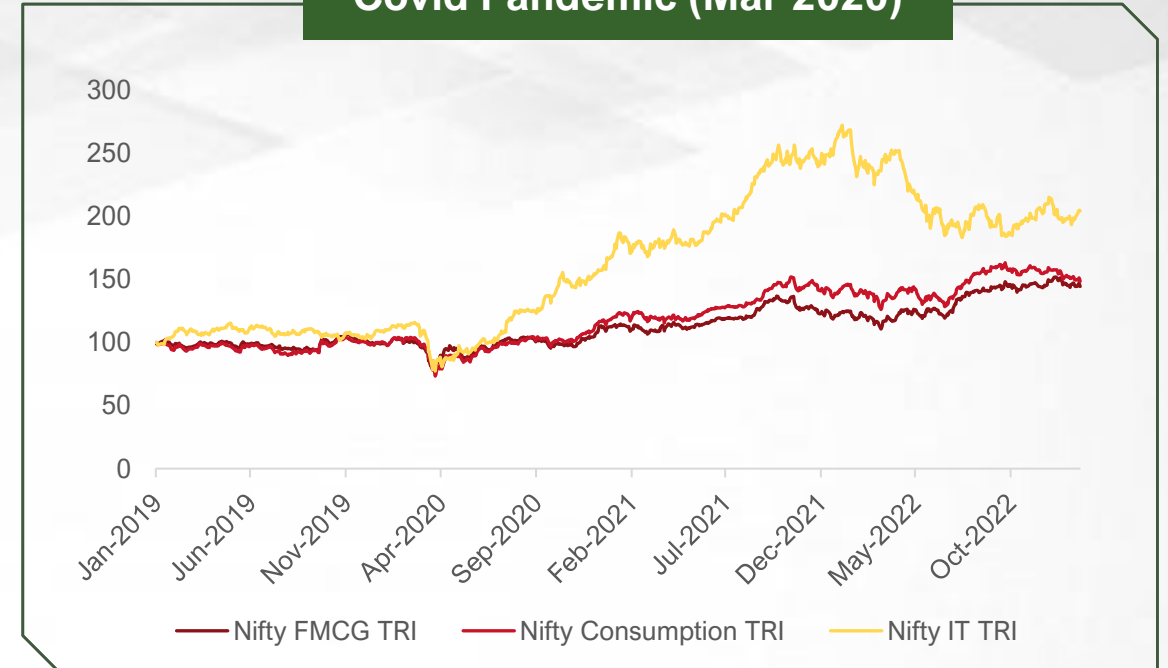

An overview of how an event impacted different sectors

Global Financial Crisis (Mar 2008 - Mar 2009)

Global Financial Crisis of 2008-09 affected the all the sectors.

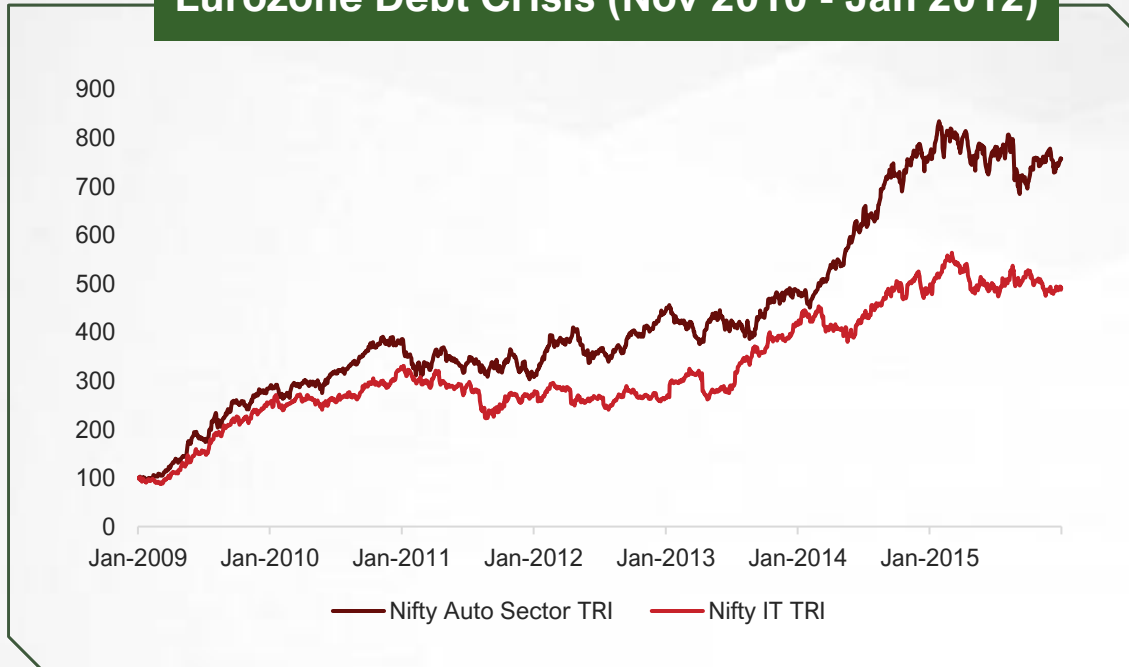

Covid Pandemic (Mar 2020)

Covid Pandemic of 2020 affected all the sectors, post that the markets were able to recover.

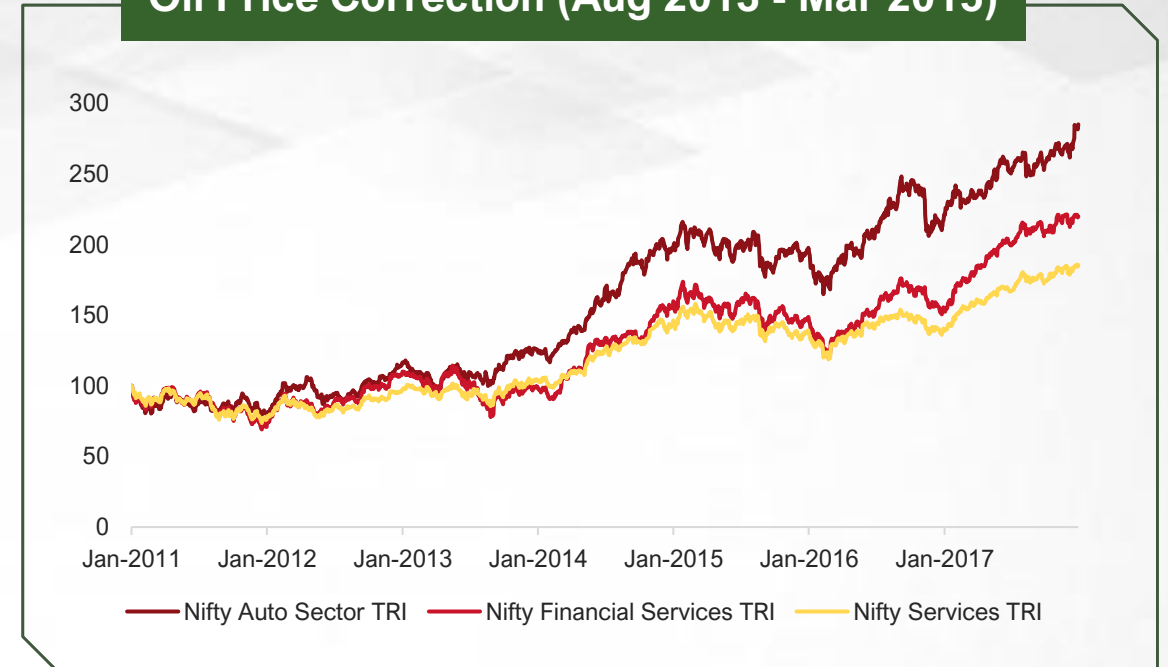

Even if some events impact majority of the sectors, the magnitude of impact is different on each sector.

Eurozone Debt Crisis (Nov 2010 - Jan 2012)

A dip was observed on our sectors during the crisis but post that they recovered well

Oil Price Correction (Aug 2013 - Mar 2015)

The reduction in Oil Prices had a positive impact on the sectors

As seen, different sectors had different reactions to, during and after the events; an investor could see each of these as a good or a bad opportunity to invest or stay exposed to an investment in these sectors.

What are Special Opportunities?

Company Specific Factors

Events that typically arise out of firm specific restructuring or investor sentiment

Industry Specific Factors

Events that arise from business cycles and macro economic factors

Regulatory Factors

Events arising from changes in fiscal and monetary policies

Geopolitical Factors

Government intervention causing economic distress

Behavioural/Technological Factors

Changes in consumer psychology and preferences

Each stock and sector reacts differently to these special situations, depending on the type of situation, sector and stock

Adverse Business Disruptions

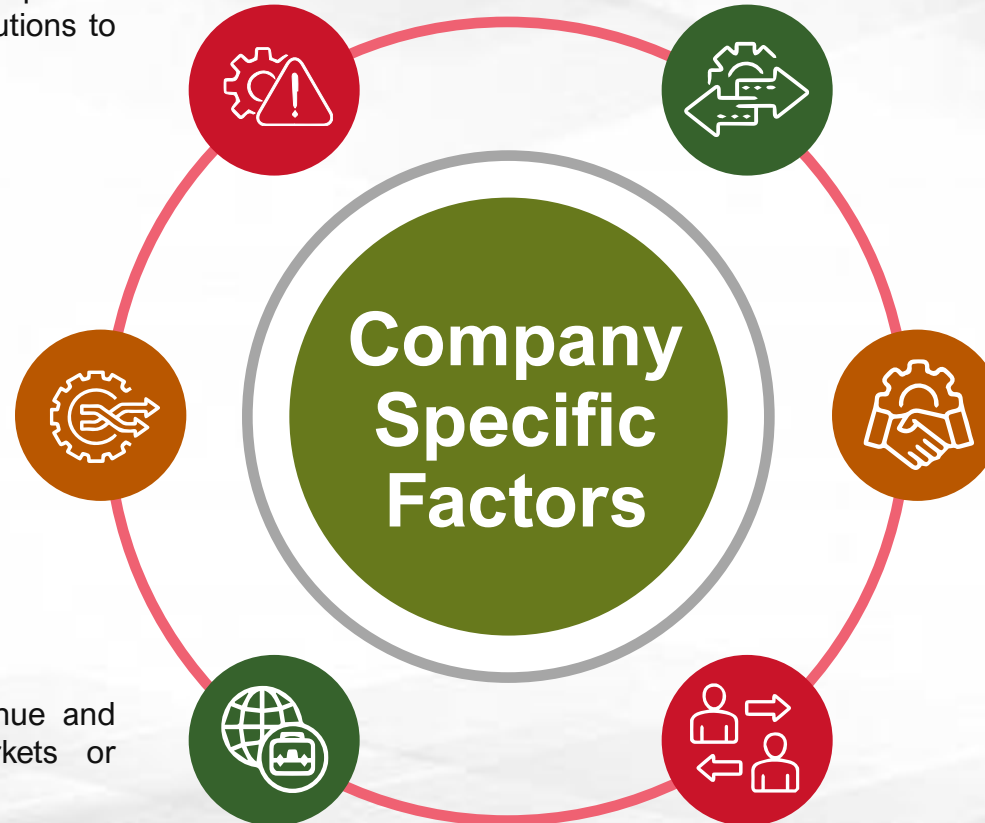

- Leads to innovation and creativity, as companies may be forced to adapt and find new solutions to overcome challenges
- Eg: Bharti Airtel Ltd

Change in Business Model

- Can help a company adapt to shifting market/regulatory conditions or take advantage of emerging trends
- Eg: Reliance Industries Ltd

New Product/Business line

- Potentially increase the company's revenue and profitability by tapping into new markets or customer segments
- Eg: TATA Motors Ltd

Financial Restructuring

- Reshuffling or reorganizing the capital structure of companies with an aim to achieve optimum balance between its debt & equity
- Eg: Radico Khaitan Ltd

M&A and JVs

- Combination of two or more entities aiming to achieve Synergies, Economies of Scale, Risk Diversification & Competitive Edge
- Eg: LTIMindtree Ltd

Management Change

- Management change can bring new ideas and fresh perspectives to the company, driving growth and success
- Eg: ICICI Bank Ltd

Change in Competition Intensity

- Competition increases if the market growth is slower
- Leads to innovation

Threat of New Entrant

- Risk a new competitor creates for current companies
- Decreases price for the consumers

Commodity prices & Inflation

- Commodity prices are leading indicators for inflation

Example – **Kotak Mahindra Bank Ltd**

The company has not only benefitted from rising interest rates (improving net interest margins) but also strong digital initiatives (that helped fend off fintech competition).

Government Reforms & Policies

- Amendments in policies by government influences economic conditions
- Stabilizes the business cycle
- Incentives to Industry

Change in Tariffs & Taxes

- Imposed by the government to protect domestic industry
- Typically incorporated to reduce imports

Regulatory Changes

- Changes in laws which affect a particular business or a sector or markets

Example – **Dixon Technologies (India) Ltd**

PLI Scheme will help Dixon leverage the government incentives to propel faster stock growth & improved forward guidance over medium to long term.

Political Events

Political changes such as elections, geopolitical conflicts, and economic treaties can adversely impact investment returns, posing risks to investors.

Geopolitical Factors

Catastrophic/ Pandemic Events

Events like war, Terrorism, Natural Disasters etc. can cause catastrophic damage to an economy by negatively impacting markets and investments

Example – **Bharat Dynamics Limited**

Defence sector companies like Bharat Dynamics benefit directly from geopolitical tensions and increased government defense spending amid border or regional conflicts.

Example – ITC Ltd

Diversification into FMCG, packaged foods, and personal care caters to evolving consumer lifestyle and health consciousness. Shift away from tobacco products due to changing consumer behavior and regulations.

Introducing

ABSL India Special Opportunities Portfolio

- Successfully built and scaled new business ventures from concept to execution across multiple domains
- He brings extensive experience across leading financial institutions, having held roles at ICICI Bank, Fidelity Mutual Fund, SBI Mutual Fund, Edelweiss Alternatives, and Kotak Alternatives.

Risk Factors associated with investments in Equity & Equity related securities:

- Risk arising from the investment objective, investment strategy, asset allocation and quant model risk:
- Market risk, political and geopolitical risk and risk arising from changing business dynamics, which may affect portfolio returns. At times, portfolios of individual clients may be concentrated in certain companies/industries. The performance of the portfolios would depend on the performance of such companies / industries / sectors of the economy.
- The portfolio proposes to invest in equity and equity related securities. Equity and Equity related securities by nature are volatile and prone to price fluctuations on a daily basis due to both macro and micro factors.
- The value of the portfolio will fluctuate as the daily prices of the individual securities in which they invest fluctuate and may be worth more or less than its original cost, at a given point in time.
- In respect of investments in equity and equity-related instruments, there may be risks associated with trading volumes, settlement periods and transfer procedures that may restrict liquidity of investments in equity and equity related securities.
- The value of the portfolio may be affected generally by factors affecting securities markets, such as price and volume volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the Government, taxation laws or policies of any appropriate authority and other political and economic developments and closure of stock exchanges which may have an adverse bearing on individual securities, a specific sector or all sectors including equity and debt markets.
- Within the regulatory limits applicable at any point in time, the Portfolio Manager may choose to invest in unlisted securities that offer attractive yields. Securities, which are not quoted on the stock exchanges, are inherently illiquid in nature and carry a larger amount of liquidity risk, in comparison to securities that are listed on the exchanges or offer other exit options to the investor, including a put option. This may however increase the risk of the portfolio. The liquidity and valuation of the portfolio's investments due to their holdings of unlisted securities may be affected if they have to be sold prior to their target date of disinvestments
- Investment made in unlisted equity or equity-related securities may only be realizable upon listing of these securities. Settlement problems could cause the portfolio to miss certain investment opportunities.
- Investors may note that Portfolio Manager's investment decisions may not always be profitable, as actual market movements may be at variance with anticipated trends.
- Though the constituent stocks of most indices are typically liquid, liquidity differs across stocks. Due to the heterogeneity in liquidity in the capital market segment, trades on this segment may not get implemented instantly.
- The portfolio may have higher concentration towards a particular stock or sector, at a given point in time. Any change in government policy or any other adverse development with respect to such a stock or the sector, may adversely affect the value of the portfolio.
- The Portfolio Manager does not intend to invest in foreign securities.
- The Portfolio Manager does not intend to engage in short selling or stock lending.
- The portfolio also proposes to invest in derivative instruments. However, the portfolio manager does not intend to write options. The Portfolio manager intends to use exchange traded derivatives as a hedging tool & does not intend to take any naked positions. Nevertheless, trading in derivatives market has risks and issues concerning the use of derivatives that investor should understand. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds.

- Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Even a small price movement in the underlying security could have a large impact on their value. Execution of such strategies depends upon the ability of the Portfolio Manager to identify such opportunities. Identification and execution of such strategies to be persuaded by the Portfolio Manager involve uncertainty and decision of the Portfolio Manager may not always be profitable. No assurance can be given that the Portfolio Manager shall be able to identify or execute such strategies.
- The risks associated with the use of derivatives are different from or possibly greater than, the risk associated with investing directly in securities and other traditional investments. As and when the product trades in the derivatives market there are risk factors and issues concerning the use of derivatives that investors should understand. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself.
- Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is a possibility that loss may be sustained by the portfolio as a result of the failure of another party (usually referred as the “counter party”) to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices. Thus, derivatives are highly leveraged instruments. Even a small price movement in the underlying security could have a large impact on their value.
- The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. Derivatives require the maintenance of adequate controls to monitor transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is a possibility that loss may be sustained by the portfolio as a result of the failure of another party (usually referred as the “counter party”) to comply with the terms of the derivatives contract. Derivative trades involve execution risks, whereby the rates seen on the screen may not be the rate at which ultimate execution takes place. The options buyer’s risk is limited to the premium paid, while the risk of an options writer is unlimited. However, the gains of an options writer are limited to the premiums earned. The writer of a put option bears the risk of loss if the value of the underlying asset declines below the exercise price. The writer of a call option bears a risk of loss if the value of the underlying asset increases above the exercise price. Investments in index futures face the same risk as the investments in a portfolio of shares representing an index. The extent of loss is the same as in the underlying stocks. Risk of loss in trading futures contracts can be substantial, because of the low margin deposits required, the extremely high degree of leverage involved in futures pricing and potential high volatility of the futures markets.
- The derivatives market in India is nascent and does not have the volumes that may be seen in other developed markets, which may result in volatility in the values. The Portfolio Manager may, from time to time, invest any un-deployed funds in Liquid Portfolio of PMS or in money market instruments. Though the portfolio of liquid funds comprises of short-term deposits, government securities and money market instruments, they cannot be considered as totally risk free. This is because liquidity patterns and short term interest rates of the government change, sometimes on a daily basis, thereby making the fund susceptible. Liquid Portfolio returns are not guaranteed and it entirely depends on market movements.

Disclaimer: The views expressed above are the views of the Portfolio Managers of the portfolio. They should not be construed as investment advice.

Investments in securities are subject to market risks and there can be no assurance or guarantee that the objectives of the Product will be achieved. **Past performance may or may not be sustained in future.**
