# Nifty Next 100: Performance matters!

- ✓ Next 100 stocks have outperformed the Top 50 stocks (Nifty Index) by 5% CAGR since January 2003, despite last 2.5 years underperformance.
- Next 100 stocks have exhibited lower volatility versus the small and mid cap stocks, but still outperformed the Nifty Midcap and Smallcap Indices over longer period.

# Nifty Next 100: Performance matters!

Nifty Next 100 Outperformance (O/P)					
Years	0/P	Next 1 year	Next 3 year Absolute O/P		
CY06	-9%	31%	58%		
CY08	-10%	36%	29%		
CY13	-11%	22%	40%		
CY18-CY20	-26%	?	?		
CY21 YTD	10%	?	?		

- Next 100 stocks have outperformed the Top 50 stocks (Nifty Index) 60% of time from CY03 to Dec'20
- Next 100 stocks have outperformed Nifty Index strongly after periods of underperformance as can be seen in the table
- The degree of outperformance in upcycle tends to be much higher than the degree of underperformance in downcycles

ADITYA BIRLA CAPITAL

### NIFTY Next 100 Portfolio is a diversified portfolio which would be primarily invested in Large and Mid Caps.

- ✓ The weight of Nifty 50 Stocks would be less than 30%
- ✓ Focus would be on top 150 stocks (excluding NIFTY 50), constituting around 70% of the portfolio
- ✓ Objective is to deliver returns higher than Large Cap Fund, without taking undue risk/volatility of small mid caps
- Well diversified across secular sectors, with less exposure to commodity cyclicals. Can take high conviction sector calls, compared to benchmark, if required.
- ✓ Stock limit: 10% at cost

Portfolio Construct				
Category Weight Rationale				
Next 100 stocks by Market cap	65%-100%	Diversified set of stocks balancing Quality, Growth & Safety		
High conviction ideas outside Next 100 stocks	0%-35%	Leverage opportunities in select high growth stocks across Nifty 50 /Small caps		

### **Investment Process**

## Investment Philosophy - Combination of Science and Art

### Science (Quantitative factors)

# **Case Studies**

## **Apollo Hospitals Ltd**

### Industry: Healthcare

- Background -Apollo Hospitals Enterprise Limited (APHS) owns and operates hospitals in India. The Company also runs a 24-hour pharmacy network via over 120 outlets across India. Apollo Hospitals also runs clinics and offer managed care and family health plans.
- ✓ Current price/Current Market Cap : Rs 4,478 / Rs. 64,381 Cr. (as of December 31, 2022)
- ✓ Price/Market Cap (at the time of purchase): Rs 1,404/ Rs. 19,448 Cr.

Secular sector: Healthcare	<ul> <li>Healthcare is amongst the top outperforming sectors in India.</li> <li>Positive operating dynamics – Aging population, growing middle class, Increase in lifestyle diseases and the current COVID pandemic</li> </ul>
Use of Proprietary screeners	<ul> <li>Captured by Proprietary screener</li> <li>Strong ROE of 7%+</li> </ul>
Fundamental Evaluation	<ul> <li>Matured hospitals and standalone pharmacies (50% of capital employed) are yielding ~23% ROCE and as new facilities, clinics and proton therapy center start contributing meaningfully, the consolidated ROCE trajectory of APHS can move up to 15%+ over the next two years.</li> <li>With no major bed additions in the next 2-3 years, APHS is strongly positioned to drive operational efficiencies and to ramp up occupancies at its new hospitals. APHS' leadership position in clinical outcomes and quality standards adds comfort on ramp up at new hospitals.</li> </ul>
Valuations	<ul> <li>At the time at purchase, Apollo Hospitals traded at 40x P/E FY21.</li> </ul>

# Apollo Hospitals Ltd

#### Aditya Birla Sun Life AMC Ltd – Portfolio Manager

Note: Stock and Index rebased to the date of first purchase / As on December 31, 2022 / Source: Bloomberg

## Divi's Laboratories Ltd

#### Industry: Healthcare

- Background –Divi's Laboratories Limited is one of the leading pharmaceutical companies in the contract manufacturing and pharmaceutical outsourcing market (CRAMS). Divi's strength lies in the manufacturing of leading generic compounds, nutraceutical Ingredients and custom synthesis of APIs and Intermediates for global innovator companies with a diverse therapeutic product portfolio.
- ✓ Current price/Current Market Cap : Rs 3,413 / Rs. 90,610 Cr. (as of December 31, 2022)
- ✓ Price/Market Cap (at the time of purchase): Rs.1,651/ Rs. 46,169 Cr.

Secular sector: Healthcare	<ul> <li>Healthcare is amongst the top outperforming sectors in India.</li> <li>Positive operating dynamics – Aging population, growing middle class, Increase in lifestyle diseases and the current COVID pandemic</li> </ul>
Use of Proprietary screeners	<ul> <li>Captured by Proprietary screener</li> <li>Strong ROE of 21%+</li> </ul>
Fundamental Evaluation	<ul> <li>Expect strong growth from FY22 with commercialization of planned capex and (2) Improvement in margins led by the benefits from backward integration, introduction of new technology and new machine design to reduce consumable costs. Similarly, expect EBITDA margin improvement despite incremental costs from recently/ new commissioned capacities.</li> <li>Divi's in the last phase of major capital expenditure (Rs.500 cr. to be spent in FY21). Divi's backward integration puts it ahead of the competition, which has only recently sought to reduce its China reliance.</li> </ul>
Valuations	• At the time of purchase, Divi's Laboratories traded at 30x P/E FY21.

- He is a member of Institute of Chartered Accountants of India (ICAI) and a commerce graduate from Mumbai University.

## **Risk Factors & Disclaimers**

#### Risk Factors associated with investments in Equity & Equity related securities:

- Risk arising from the investment objective, investment strategy, asset allocation and quant model risk:
- Market risk, political and geopolitical risk and risk arising from changing business dynamics, which may affect portfolio returns. At times, portfolios of individual clients may be concentrated in certain companies/industries. The performance of the portfolios would depend on the performance of such companies / industries / sectors of the economy.
- The portfolio proposes to invest in equity and equity related securities. Equity and Equity related securities by nature are volatile and prone to price fluctuations on a daily basis due to both macro and micro factors.
- The value of the portfolio will fluctuate as the daily prices of the individual securities in which they invest fluctuate and may be worth more or less than its original cost, at a given point in time.
- In respect of investments in equity and equity-related instruments, there may be risks associated with trading volumes, settlement periods and transfer procedures that may restrict liquidity of investments in equity and equity related securities.
- The value of the portfolio may be affected generally by factors affecting securities markets, such as price and volume volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the Government, taxation laws or policies of any appropriate authority and other political and economic developments and closure of stock exchanges which may have an adverse bearing on individual securities, a specific sector or all sectors including equity and debt markets.
- Within the regulatory limits applicable at any point in time, the Portfolio Manager may choose to invest in unlisted securities that offer attractive yields. Securities, which are not quoted on the stock exchanges, are inherently illiquid in nature and carry a larger amount of liquidity risk, in comparison to securities that are listed on the exchanges or offer other exit options to the investor, including a put option. This may however increase the risk of the portfolio. The liquidity and valuation of the portfolio's investments due to their holdings of unlisted securities may be affected if they have to be sold prior to their target date of disinvestments
- Investment made in unlisted equity or equity-related securities may only be realizable upon listing of these securities. Settlement problems could cause the portfolio to miss certain investment opportunities.
- Investors may note that Portfolio Manager's investment decisions may not always be profitable, as actual market movements may be at variance with anticipated trends.
- Though the constituent stocks of most indices are typically liquid, liquidity differs across stocks. Due to the heterogeneity in liquidity in the capital market segment, trades on this segment may not get implemented instantly.
- The portfolio may have higher concentration towards a particular stock or sector, at a given point in time. Any change in government policy or any other adverse development with respect to such a stock or the sector, may adversely affect the value of the portfolio.
- The portfolio also proposes to invest in derivative instruments. The Portfolio manager intends to use exchange traded derivatives as a hedging tool & does not intend to take any naked positions. Nevertheless, trading in derivatives market has risks and issues concerning the use of derivatives that investor should understand. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds.

## **Risk Factors & Disclaimers**

- Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Even a small price movement in the underlying security could have a large impact on their value. Execution of such strategies depends upon the ability of the Portfolio Manager to identify such opportunities. Identification and execution of such strategies to be persuaded by the Portfolio Manager involve uncertainty and decision of the Portfolio Manager may not always be profitable. No assurance can be given that the Portfolio Manager shall be able to identify or execute such strategies.
- The risks associated with the use of derivatives are different from or possibly greater than, the risk associated with investing directly in securities and other traditional investments. As and when the product trades in the derivatives market there are risk factors and issues concerning the use of derivatives that investors should understand. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself.
- Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is a possibility that loss may be sustained by the portfolio as a result of the failure of another party (usually referred as the "counter party") to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices. Thus, derivatives are highly leveraged instruments. Even a small price movement in the underlying security could have a large impact on their value.
- The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. Derivatives require the maintenance of adequate controls to monitor transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is a possibility that loss may be sustained by the portfolio as a result of the failure of another party (usually referred as the "counter party") to comply with the terms of the derivatives contract. Derivative trades involve execution risks, whereby the rates seen on the screen may not be the rate at which ultimate execution takes place. The options buyer's risk is limited to the premium paid, while the risk of an options writer is unlimited. However, the gains of an options writer are limited to the premiums earned. The writer of a put option bears the risk of loss if the value of the underlying asset declines below the exercise price. The writer of a call option bears a risk of loss if the value of the underlying asset increases above the exercise price. Investments in index futures face the same risk as the investments in a portfolio of shares representing an index. The extent of loss is the same as in the underlying stocks. Risk of loss in trading futures contracts can be substantial, because of the low margin deposits required, the extremely high degree of leverage involved in futures pricing and potential high volatility of the futures markets.
- The derivatives market in India is nascent and does not have the volumes that may be seen in other developed markets, which may result in volatility in the values. The Portfolio Manager may, from time to time, invest any un-deployed funds in Liquid Portfolio of PMS or in money market instruments. Though the portfolio of liquid funds comprises of short-term deposits, government securities and money market instruments, they cannot be considered as totally risk free. This is because liquidity patterns and short term interest rates of the government change, sometimes on a daily basis, thereby making the fund susceptible. Liquid Portfolio returns are not guaranteed and it entirely depends on market movements.
- Disclaimer: The views expressed above are the views of the Fund Managers of Nifty Next 100 Portfolio. They should not be construed as investment advice.
- Investments in securities are subject to market risks and there can be no assurance or guarantee that the objectives of the Product will be achieved. Past performance may or may not be sustained in future.
- Regulatory Disclosure: All investors have the option to invest directly with ABSLAMC-Portfolio Manager
